## 16. MACHINING THE NESTED PARTS

**Resources** – Download the file from [www.emastercam.com/files/x4\\_pc-router.html](http://www.emastercam.com/files/x4_pc-router.html)

➊ File

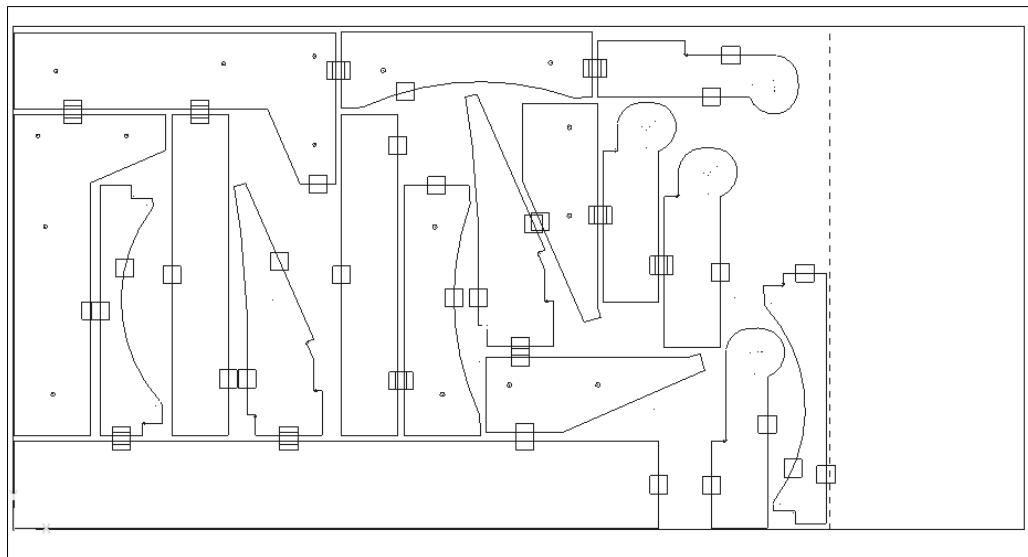

Open

➋ Select Frame Nested.mcx

- ➌ Delete the text “Sheet #1 Results and the original parts and keep only the sheet with the nested parts as shown.

Screen

➌ Combine Views

- ➍ This ensures that all arcs are moved from the parallel views to the single view. This option is useful when you translate files from other applications and want to reduce the number of different views. For example, if you have arcs on the bottom view and top view, Mastercam moves all arcs to top view.

### Properties

#### Tool Settings

- ➊ Set the Program # 600
- ➋ Enable **Assign tool numbers sequentially** and all the **Advanced** options.
- ➌ Enable **Feed Calculation From Tool**

#### Establishing the stock size

- ➊ Set the stock size using **All Entities** button. Enter the thickness of the stock Z=16
